

New Views of the Ancient City of Teotihuacan

Teotihuacan — the first and biggest city in the Western Hemisphere in what is now central Mexico — was a bustling place of 80,000 in A.D. 200. Today it's an archaeological site visited by millions of tourists each year.

ASU's Teotihuacan Research Laboratory is the only foreign archaeological lab on site. Research there helps us answer key questions about the origins and development of cities.

Join us as lab director **Michael E. Smith** shows how new discoveries and new ideas intersect to help illuminate the urban history of Earth.

When

6-8 p.m. Wednesday, Aug. 31.

Where

Alumni Lounge in the Memorial Union, Tempe campus (MU 202).

Details

Free and open to the public; light refreshments will be served.
