

Geographic Information Systems (GIS) in Digital Humanities Workshop

Friday, November 3, 2017

9 a.m.-12 p.m. | Computing Commons 207

Organizers: Dr. Joshua MacFadyen and Daniel Milowski

The “**GIS in Digital Humanities**” workshop introduces faculty and students to spatial analysis and Geographic Information Systems (GIS) applications for historical research and teaching. GIS applications include mapping and other geospatial technologies, however, no previous GIS experience or advanced computing skills are required in order to attend.

The workshop format will consist of **two interactive sessions**. We will begin with a general introduction to the technology and the ways historians have used it, including some of SHPRS’ own graduate students. This session will conclude with a discussion and Q&A, and we welcome input from participants who would like to discuss geospatial problems and possibilities with their own historical research or teaching. The second session involves a hands-on tutorial using historical data in a GIS. Participants in the second session are encouraged to familiarize themselves with The Geospatial Historian online tutorial before attending, particularly the ArcGIS lessons found at www.geospatialhistorian.wordpress.com/lessons/.

What to bring:

- your questions about GIS
- (optional) a laptop computer with ArcMap 10
- (optional) samples of your own historical sources or data for discussion

RSVP appreciated, but not required.
Please indicate the sessions you will attend.

.eventbrite.com](http://gisindigitalhumanities.eventbrite.com)

Those who RSVP will receive an email and recommended discussion reading leading up to the event.
All members of the ASU community are welcome, although priority seating will be given to graduate students and faculty.
