NSF Futures Engine
in the Southwest

3rd Annual International Atmospheric Water Harvesting Summit

Atmospheric water extraction or harvesting (AWH) is emerging as a potential solution to global water challenges.

Multiple industries, including beverage, healthcare, semiconductor and data centers, are investing in research, pilot tests, and the integration of AWH into their water portfolio to achieve net-zero water footprints.

Join us for a two day, in person event to collaborate with subject matter experts for sessions on:

- End to end water production rates and energy efficiency
- Thermodynamics and waste heat
- Process engineering and reactor designs
- Microclimate, air quality, and geospatial considerations
- Applications: humanitarian, food/agriculture, data centers and dehumidification
- Policy and regulations to support AWH adoption
- AWH roadmapping, LCA, TEA progress

Date
January 15-16, 2026

Location
Arizona State University
Memorial Union
Tempe, AZ

Register by January 1, 2026

In partnership with ASU
Julie Ann Wrigley Global Futures Laboratory: Arizona Water Innovation Initiative

Ira A. Fulton Schools of Engineering: Global Center for Water Technology
